Using energy efficiently helps organizations save money as well as helping to conserve resources and tackle climate change. ISO 50001 supports organizations in all sectors to use energy more efficiently, through the development of an energy management system (EnMS). It designed to support organizations in all sectors and provides a practical way to improve energy use, through the development of EnMS.

EnMs introduce a model to follow when setting up and operating a management system, find out more about how MSS work and where they can be applied.

ISO 50001 is based on the management system model of continual improvement also used for other well-known standards such as ISO 9001 or ISO 14001. This makes it easier for organizations to integrate energy management into their overall efforts to improve quality and environmental management.

By implementing the ISO 50001 Standard organizations can achieve significant improvements in energy performance through the use of the management system.

Overview

ISO 50001, an international standard on energy management system, was originally published by the ISO in June 2011. The ISO 50001 standard offers a systematic framework for organizations to manage energy and provides requirements for a systematic, data driven and facts-based process, focused on improving energy performance.

The standard promotes the adoption of energy management best practices and reinforces good energy management behaviors. According to the ISO, the standard could influence up to 60% of the world's energy use, with broad applicability across national economic sectors.

By implementing the ISO 50001 requirements, your organization will have a plan for promoting energy efficiency throughout your supply chain by creating transparency and better communication on the management of your energy resources.

Benefiting You

- Reduced energy consumption
- Improved energy efficiency
- Reduced energy costs and increased savings
- Reduced environmental impacts
- Better use of existing energy-consuming assets
- Facilitates energy management improvements in the context of greenhouse gas emission reduction projects
- Continual improvement in energy performance

With You All The Way

LSQA Middle East is at the forefront of Energy Management Systems. We are fully accredited to offer third-party certification to the ISO 50001 standard and recognized by IAF.

LSQA Middle East EOMS services include multi level trainings including Awareness, Foundation, Documentation, implementation, internal auditing, and CQI/IRCA Lead Auditor courses.

Also, we have been providing occupational health and safety management system certification services since 2012. We can bring this experience to all our clients globally, while leveraging our extensive expertise in the related management system standards including ISO 9001, ISO 45001, ISO 22000 and ISO 14001 etc.

Our experts have the knowledge and experience to guide you successfully through the entire certification process. Our ISO 50001 services include training and pre-audit assessment. We also offer ongoing support through follow-up audits and certification renewal.
